Appendix 6: Explanation of education levels

The International Standard Classification of Education (ISCED) is an instrument suitable for compiling statistics on education internationally⁴.

Basic

This level begins between 5 and 7 years of age, is compulsory in all countries and generally lasts from four to six years.

Lower secondary education

Teaching is typically more subject-focused than at the previous level. Usually, the end of this level coincides with the end of compulsory education.

Upper secondary education

This level generally begins at the end of compulsory education. The entrance age is typically 15 or 16 years. Entrance qualifications (end of compulsory education) and other minimum entry requirements are usually needed. The typical duration of this education varies from two to five years.

Post-secondary non-tertiary education

These programmes straddle the boundary between upper secondary and tertiary education. They serve to broaden the knowledge of upper secondary graduates. After completions, students can go on to the next level or opt for direct labour market entry.

Tertiary education (first stage)

Entry to these programmes normally requires the successful completion of post-secondary level. This level includes tertiary programmes with academic orientation (type A) which are largely theoretically based and with occupation orientation (type B) which are typically shorter than type A programmes and geared for entry into the labour market.

Tertiary education (second stage)

This level is reserved for tertiary studies that lead to an advanced research qualification (Ph.D. or doctorate).
