WageIndicator Foundation - www.wageindicator.org

WageIndicator Foundation (Amsterdam) collects, compares and shares labour market information through online and offline surveys and research. Its national websites serve as always up-to-date online libraries featuring minimum wage, living wages, labour law, collective agreements, working conditions and career advice, for employees, employers and social partners. In this way, WageIndicator is a life changer for millions of people around the world.

Centre for Labour Research (Pakistan) is the WageIndicator Labour Law office, based in Islamabad, Pakistan.

Acknowledgements

Many team members from WageIndicator around the world contributed to collecting labour law information in their country. The Centre for Labour Research would like to thank its team members who have worked on the WageIndicator Labour Law Database. These include Iftikhar Ahmad (team lead), Ayesha Mir, Seemab Haider, Razan Ayesha, Arooj Rizwan, Saad Alam, Ayesha Kiran, Atifa Azad and Sobia Mir.

1. Introducing the WageIndicator Labour Law Database

The WageIndicator Labour Law Database aims to collect information about national Labour Law. The database is used to publish relevant clauses with information about the national Labour Law on the national WageIndicator websites and on the home page of WageIndicator¹.

All Labour Law clauses in the database are also coded, according to a coding scheme, as presented in this codebook. These codes support the generation of the biennial Labour Rights Index for all countries in the database². The Index is a de jure index that measures major aspects of employment regulation affecting a worker during the employment life cycle. The Labour Rights Index covers 10 topics/indicators and 46 evaluation criteria. All of these are based on substantive elements of the Decent Work Agenda. The criteria are all grounded in UDHR, five UN Conventions, five ILO Declarations, 35 ILO Conventions, and four ILO Recommendations.

The Labour Law database is used for the Decent Work Check, a tried and tested WageIndicator product. Created together with trade unions and employers organisations and WageIndicator teams. The Decent Work Check is used as an offline tool - in print. The check works as an awareness tool and a quick check of your labour law knowledge. The Decent Work Check is seen as an eyeopener for workers, trade unionists, employers and even labour inspectors. The data collection started in 2013 with 16 countries, and gradually more countries were added. As of today, the WageIndicator Labour Law Database holds detailed country profiles for 122 countries. More countries are scheduled for the years to come.³ Each year, the national labour laws are checked for updates. In addition, the database is also used to generate Decent Work Surveys, whereby workers are informed about the compliance of their job with the Labour Law. These Surveys are currently running in Bangladesh⁴, Ethiopia⁵, and Indonesia⁶.

The data collection method is through desk research, which is possible because all national laws can be accessed through the Internet. The database is based on more than 13 years of research by WageIndicator Foundation (Netherlands) and its labour law office, i.e., the Centre for Labour Research (Pakistan). More than 30 WageIndicator team members have contributed to the Index by providing relevant data informing various indicators under the Index.

The WageIndicator Labour Law Database includes coded labour law data for 122 countries. The codes for the Decent Work Check countries (Bangladesh, Ethiopia, and Indonesia) are double checked, which is not yet the case for the countries not yet included. The list of countries in the WageIndicator Labour Law Database can be found in Table 5. Table 1 provides a list of all variables and values in the database; variable type and value labels; number of observations and minimum and maximum values. Table 2 holds a list of industries, according to the NACE industry classification. Table 3 has a list of the job titles, coded according to. Table 4 includes a list of the codes and names of the bank holidays.

Figure 1 shows that the data collection started in 2013 with 16 countries, that gradually more countries were added, eventually reaching 122 countries.

Figure 1: Number of countries included in the Labour Law database

2. Variables and values in database

Table 1 Variable name and variable label; variable type and value labels; number of observations and minimum and maximum values. Some variables have been highlighted in **Cyan** colour which means one of the following happened:

- Question was rephrased
- New option was added in the existing question
- The answer option already existed, the text was rephrased.
- The answer option or Question was removed

These changes happened for 70 questions. The historical profiles have also been recoded as per the changed questions and responses.

The Codebook also includes 16 new questions, using which only the 2025 data has been coded. The future data will also be coded using these new questions. These are highlighted in this codebook as **Green**. The number of observations for each variable are based on the data file from 16 March 2026. A data file from a later date should generally have at least the number of observations mentioned in this codebook or even higher since revised country profiles are regularly added along with new country profiles for new countries.
